

Processing data

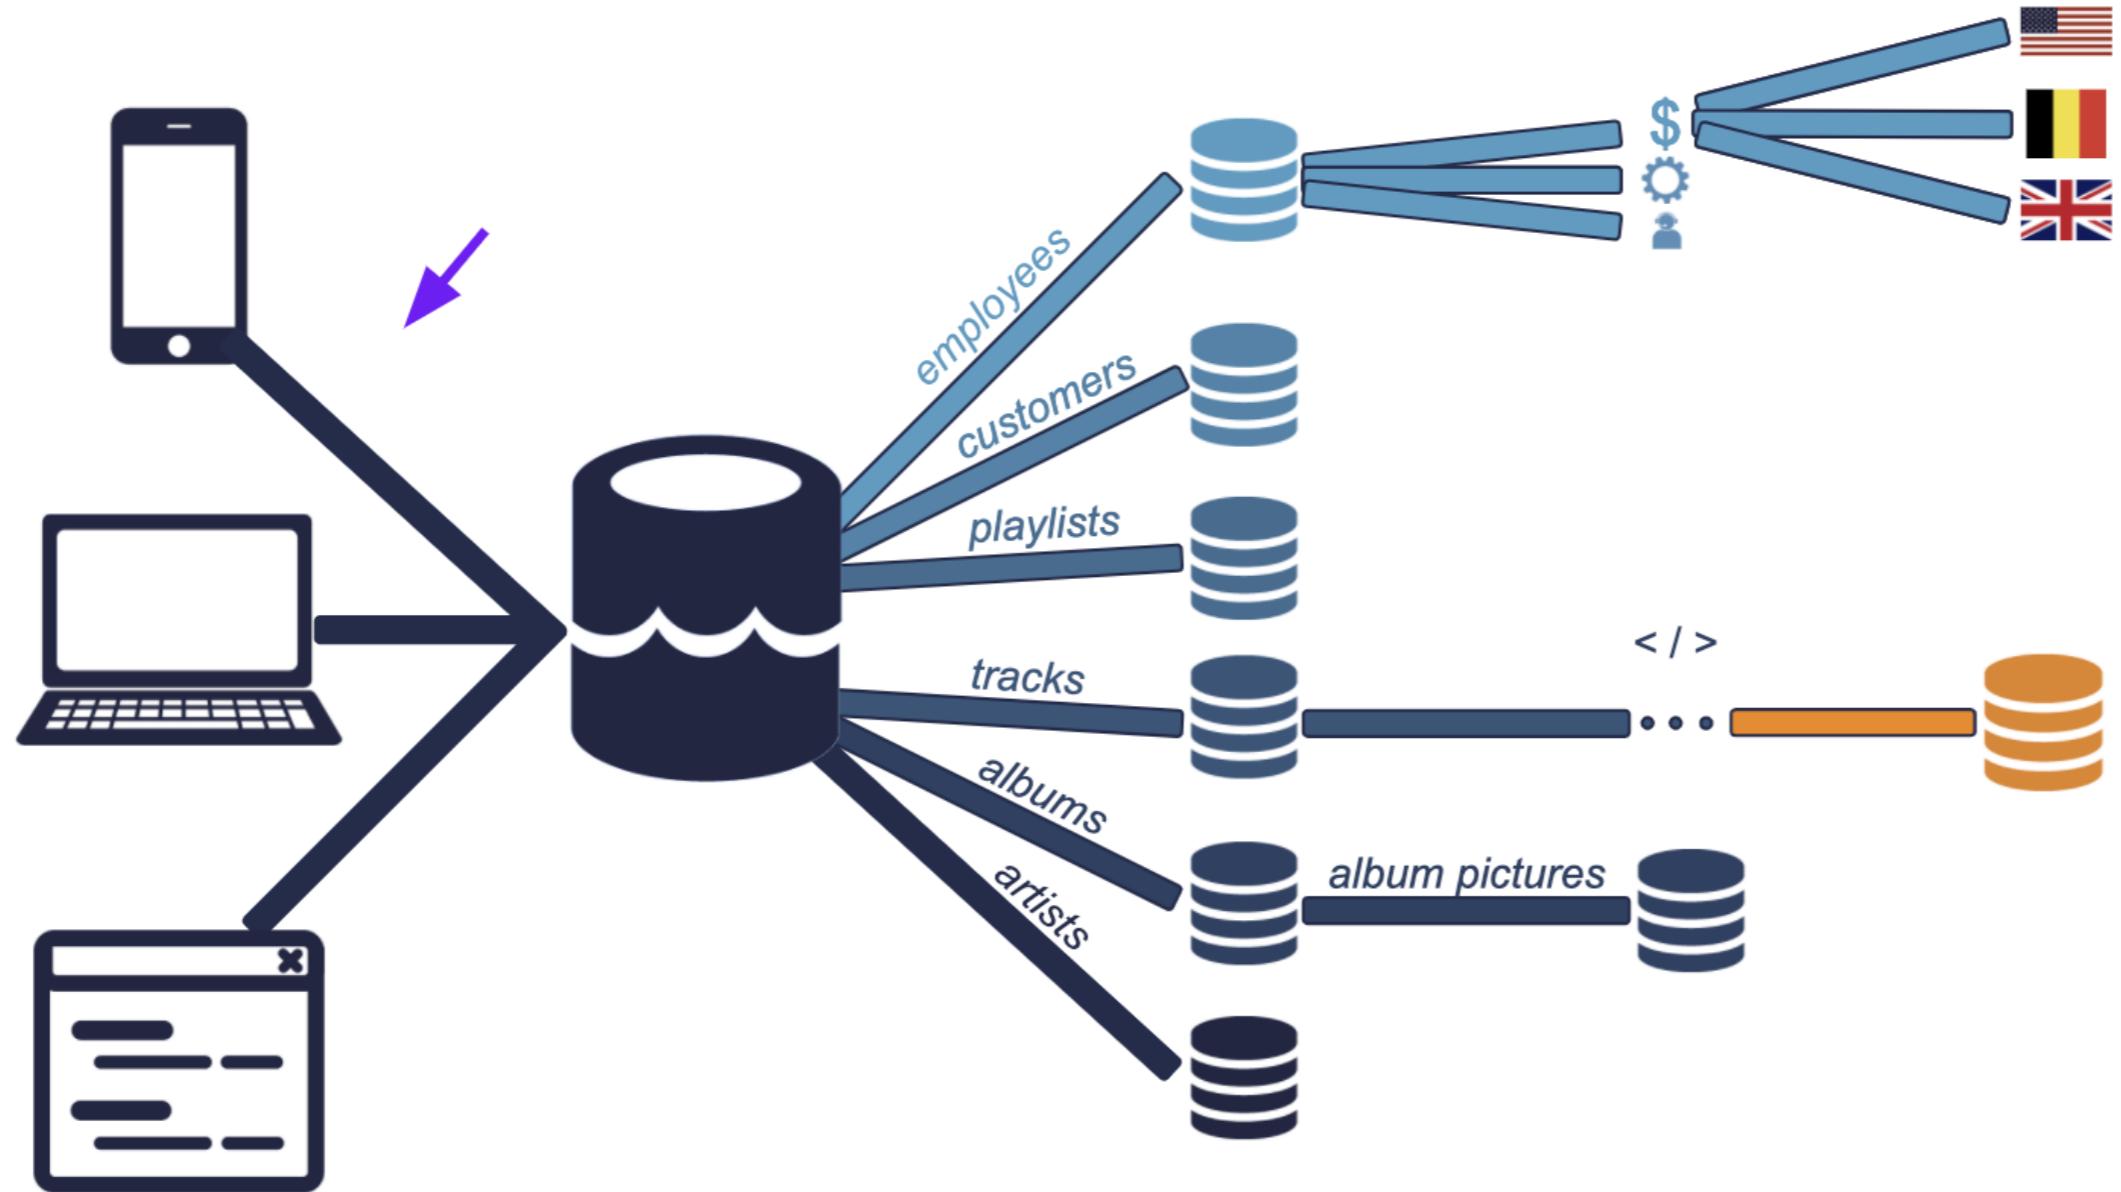

DATA ENGINEERING FOR EVERYONE

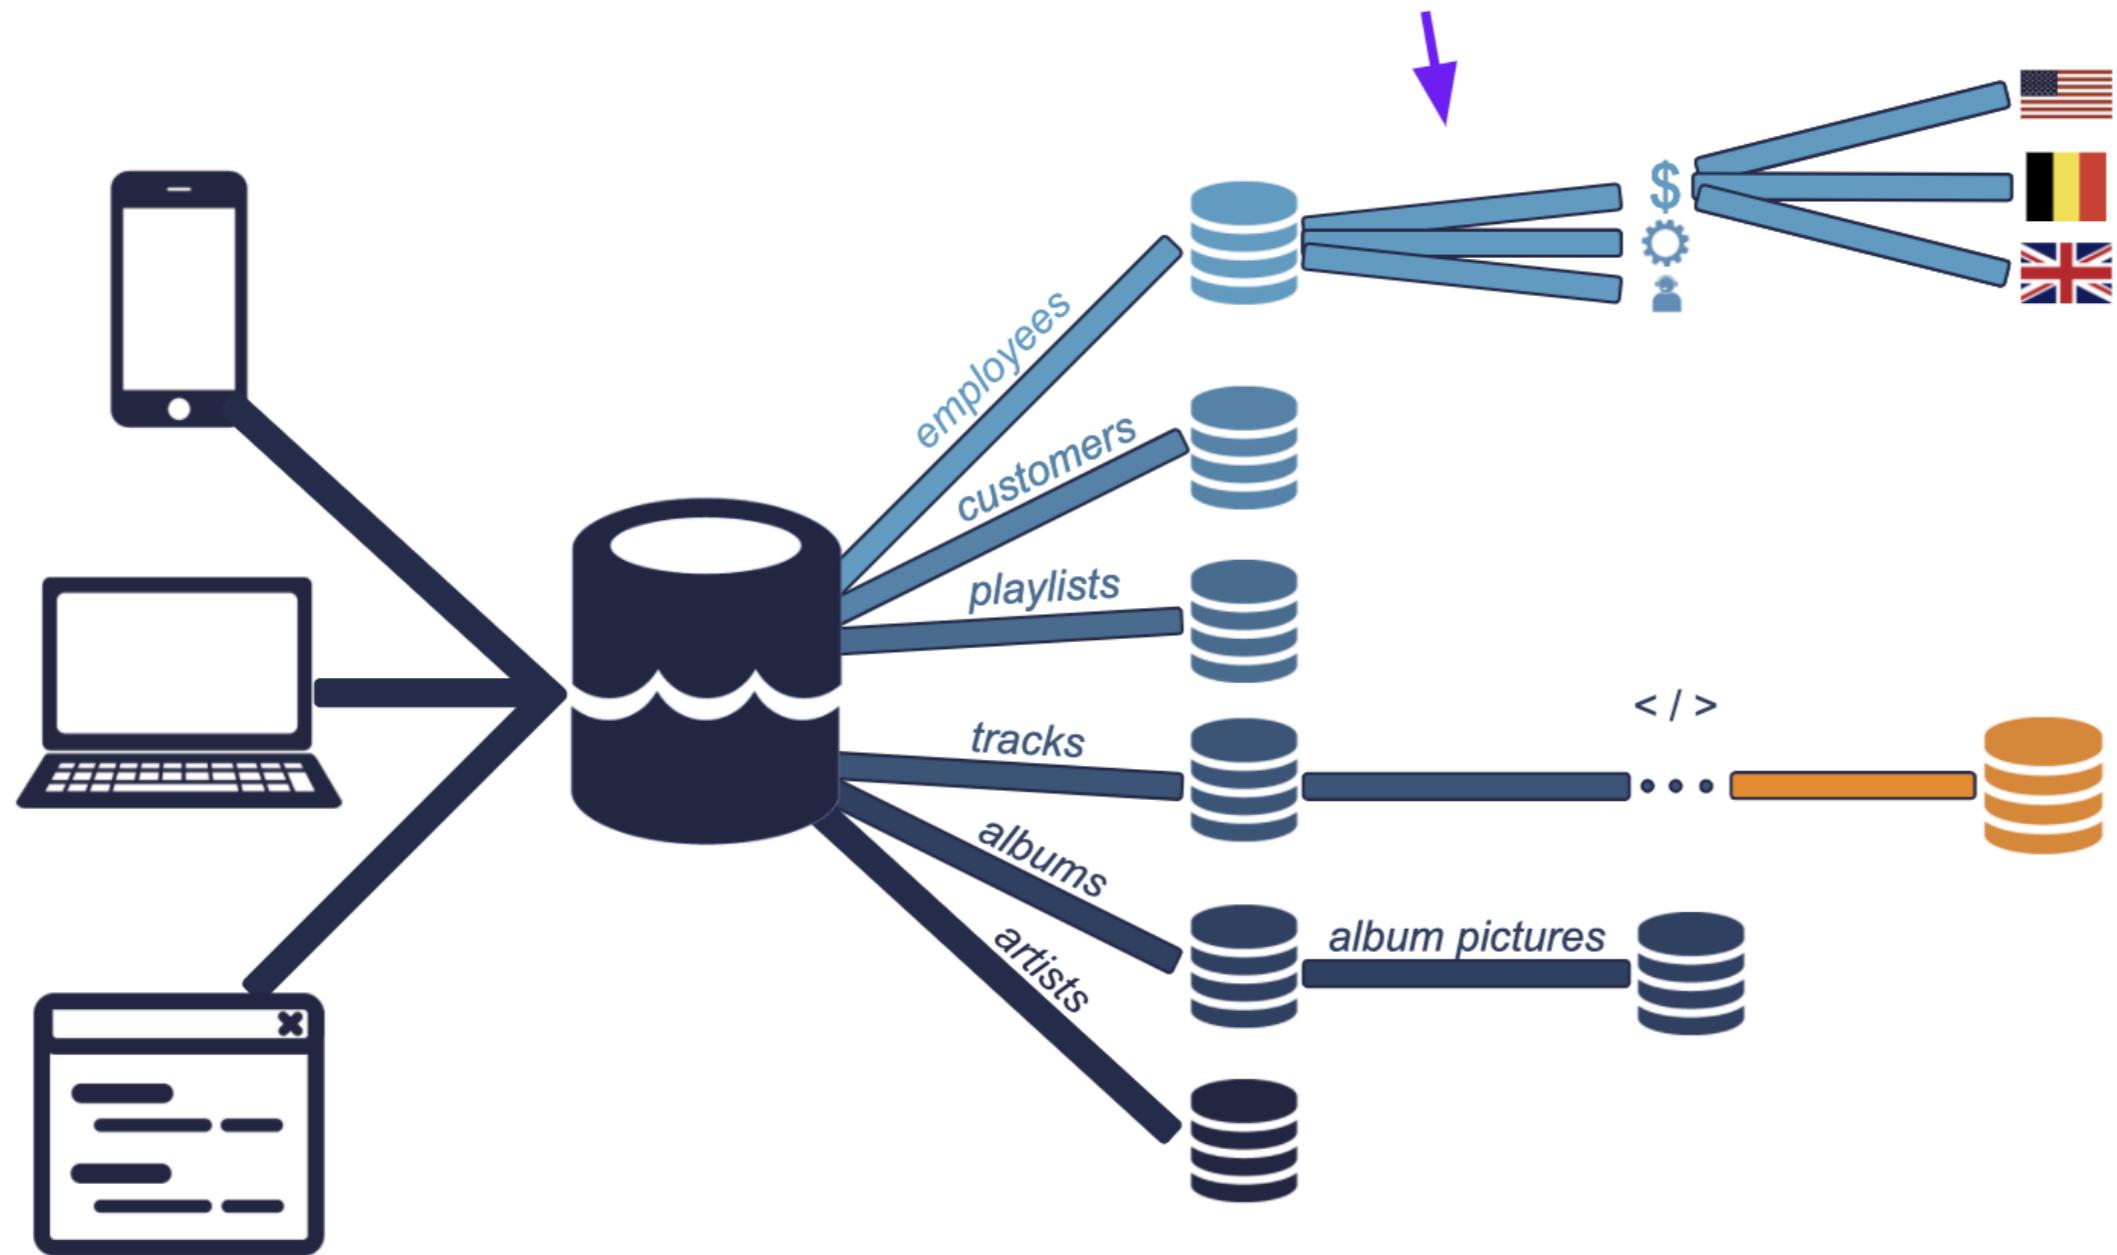

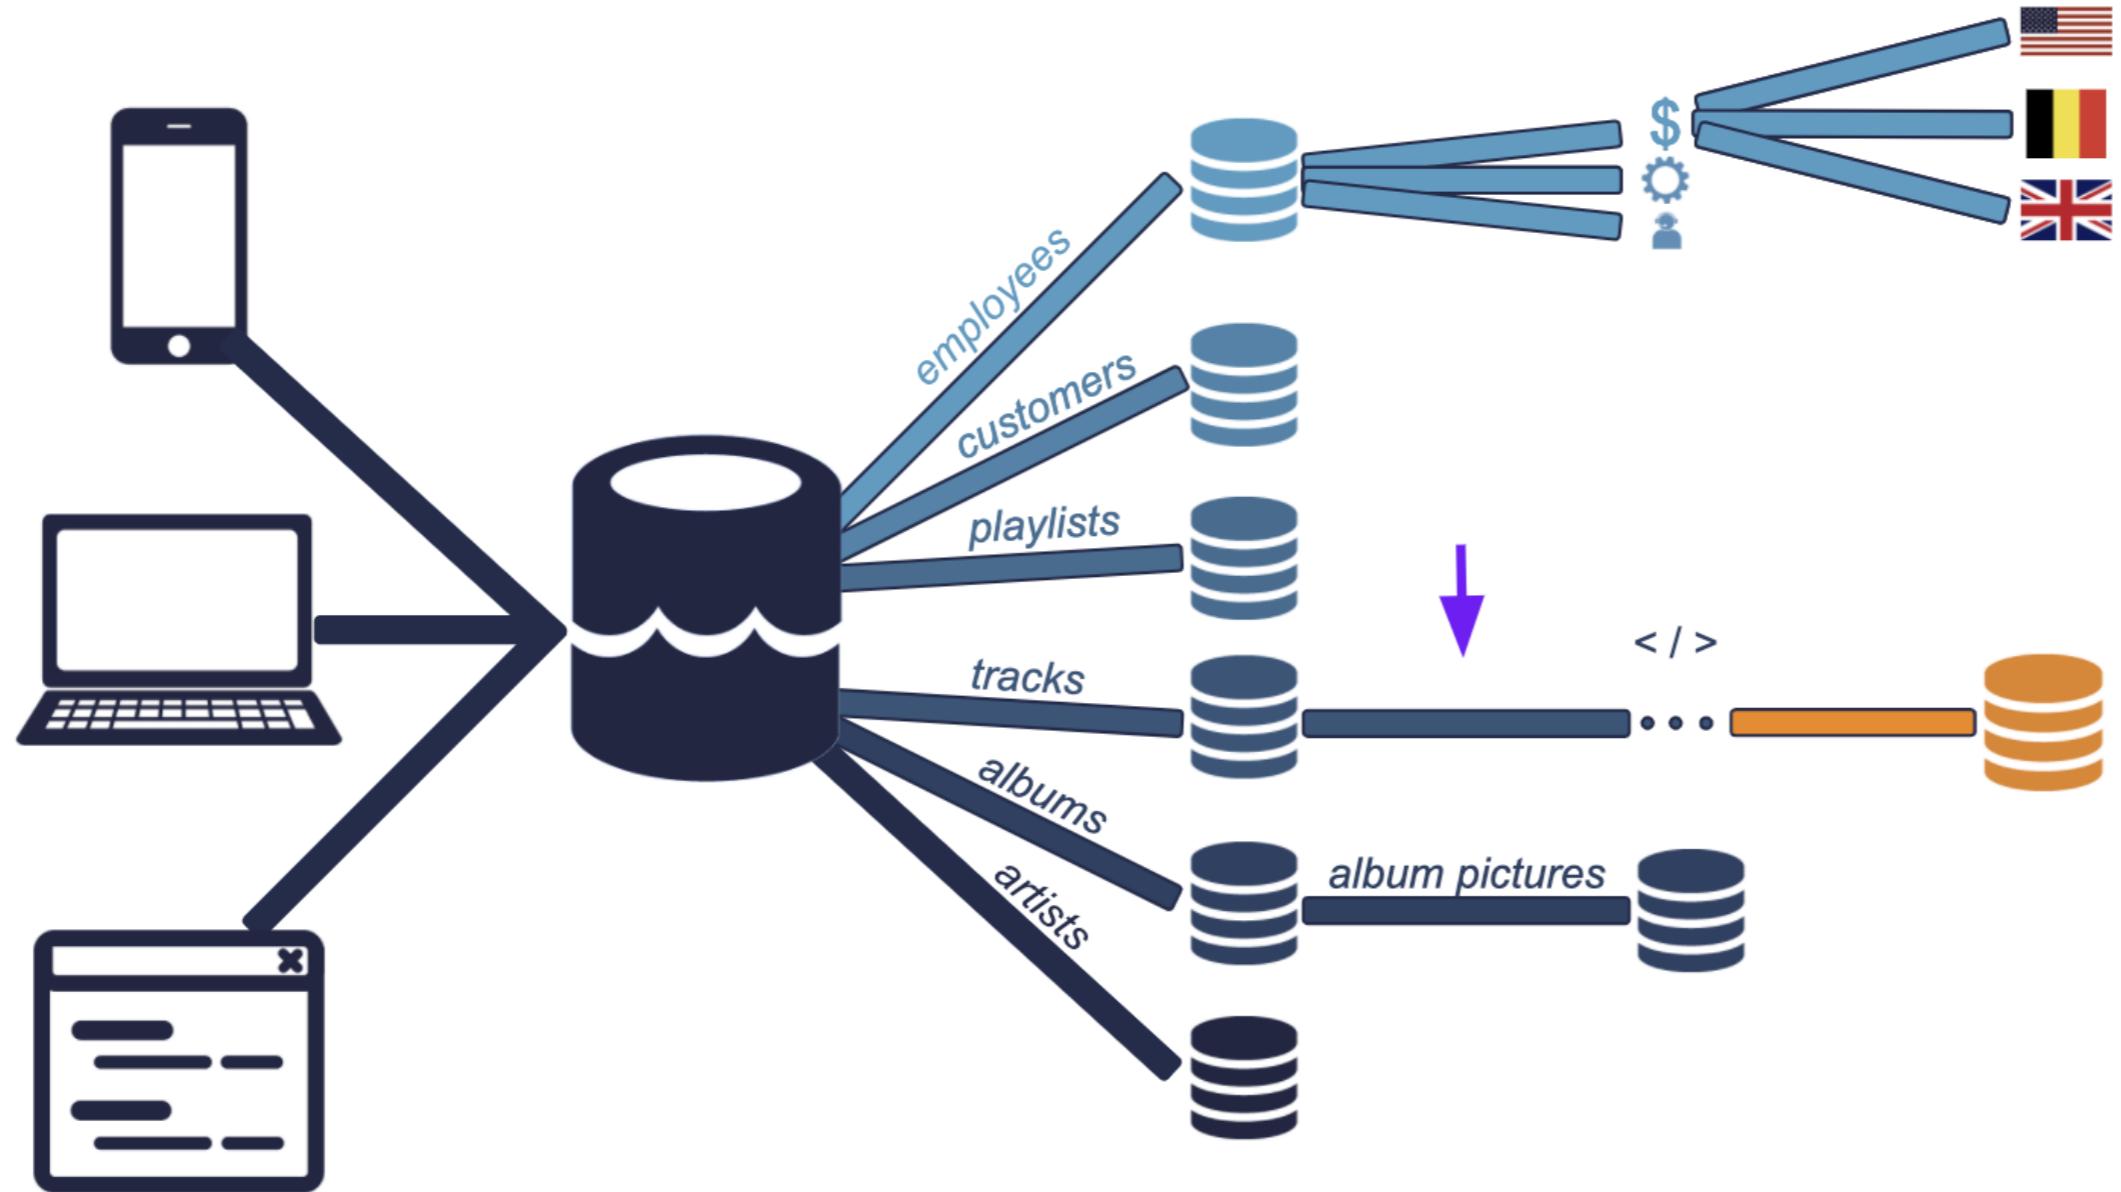

Hadrien Lacroix

Content Developer at DataCamp

A general definition

- Data processing: converting **raw** data into **meaningful** information

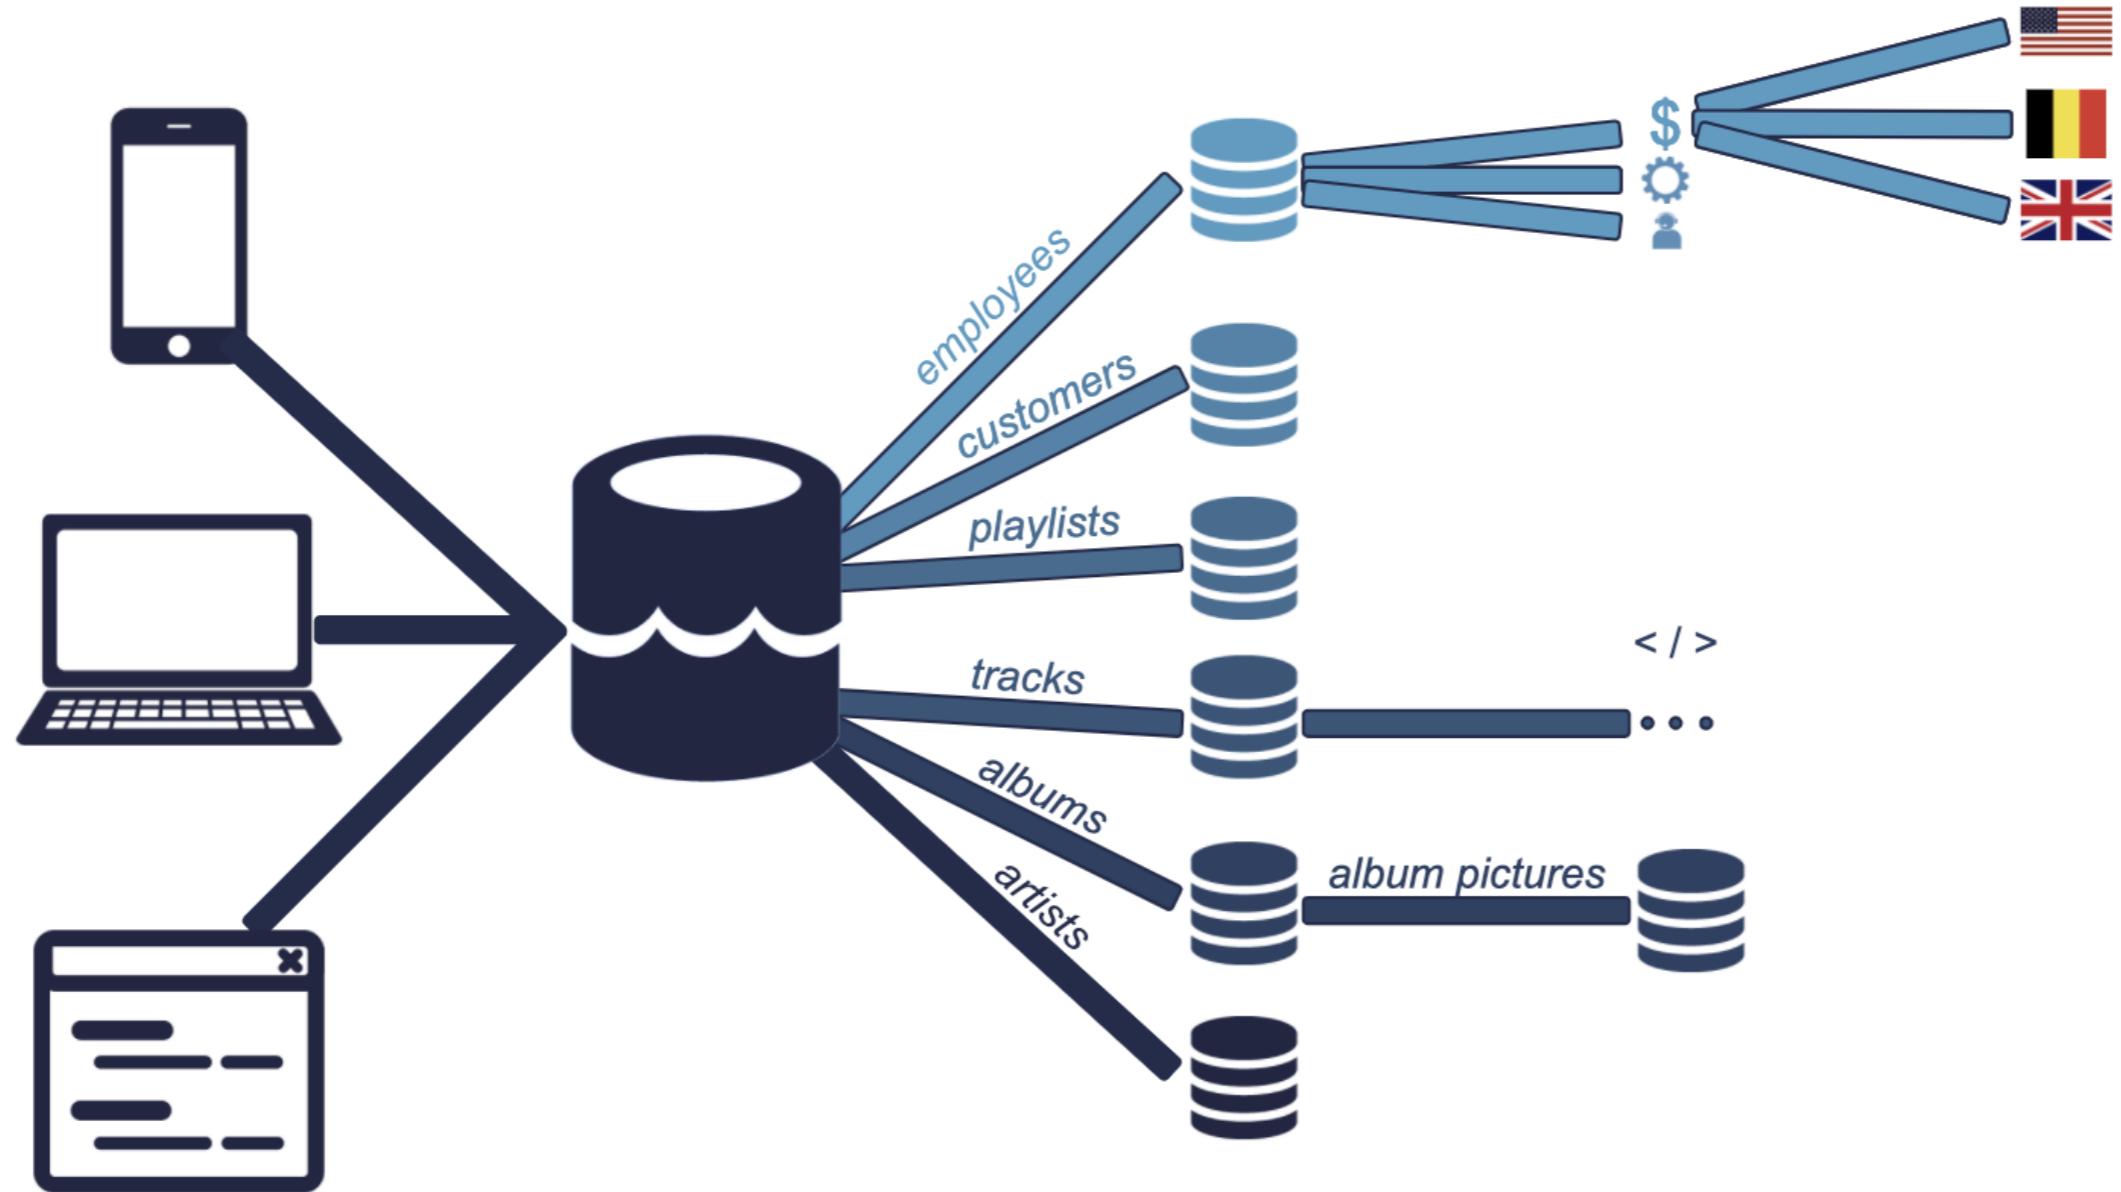

Data processing value

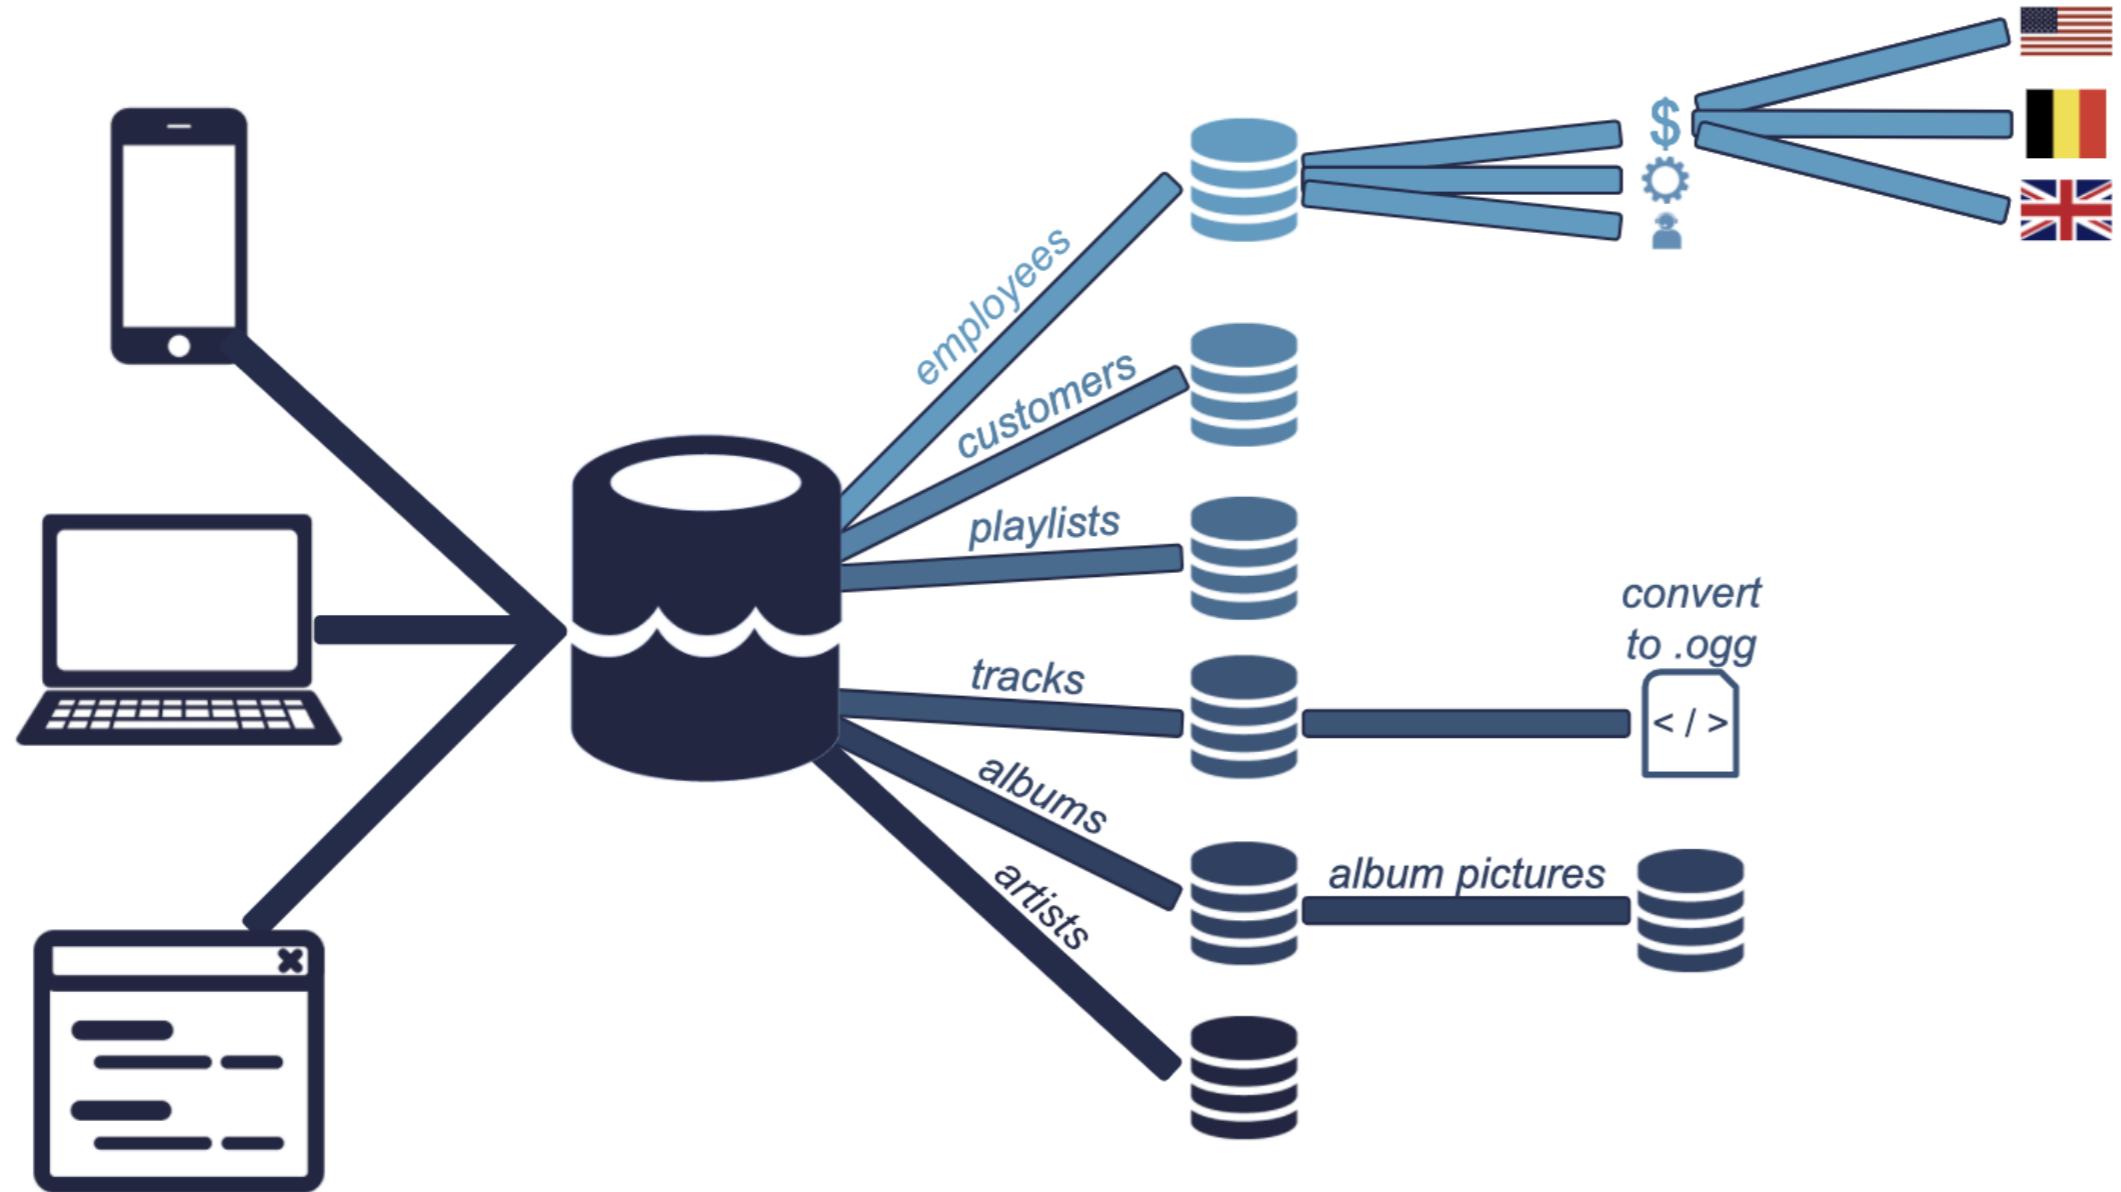

Conceptually

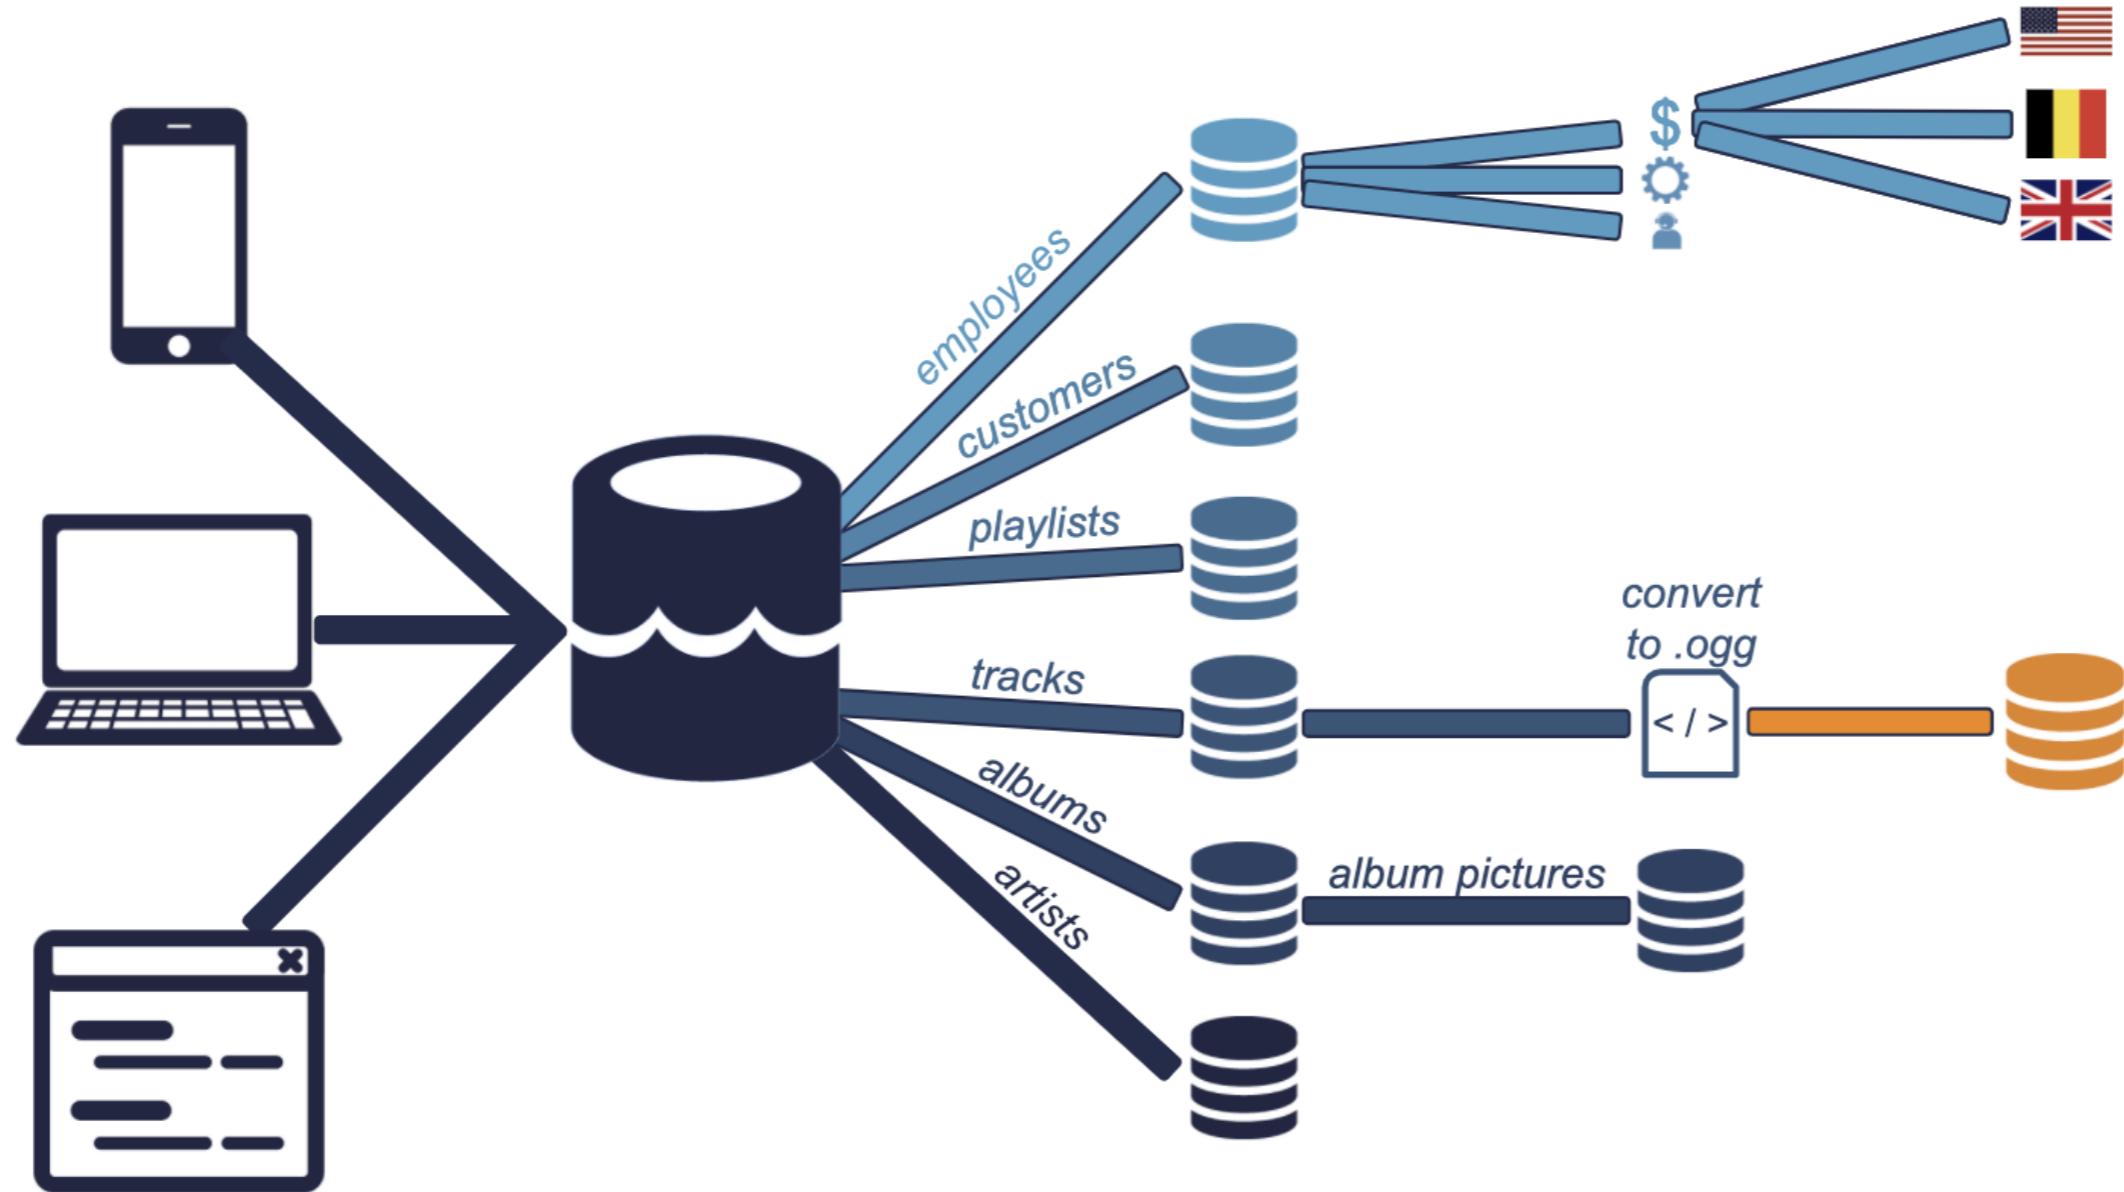

- Remove unwanted data
- Optimize memory, process and network costs
- Convert data from one type to another

At Spotflix

- No long term need for testing feature data
- Can't afford to store and stream files this big

Data processing value

Conceptually

- Remove unwanted data
- To save memory
- Convert data from one type to another
- Organize data
- To fit into a schema/structure
- Increase productivity

At Spotflix

- No need for lossless format
- Can't afford to store files this big
- Convert songs from `.flac` to `.ogg`
- Reorganize data from the data lake to data warehouses
- Employee table example
- Enable data scientists

How data engineers process data

- Data manipulation, cleaning, and tidying tasks
 - that can be automated
 - that will always need to be done
- Store data in a sanely structured database
- Create views on top of the database tables
- Optimizing the performance of the database
- Rejecting corrupt song files
- Deciding what happens with missing metadata
- Separate artists and albums tables...
- ...but provide view combining them
- Indexing

Batch processing

amazon
EMR

A P A C H E

Stream processing

APACHE
STORM™
Distributed • Resilient • Real-time

Spring Cloud
Data Flow

Flink

¹ The difference between batch and stream will be explained in the next lesson!

Summary

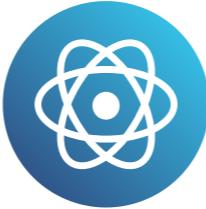

- What data processing is
- Why it's necessary
- What it consists in
- How we process data at Spotflix

Let's practice!

DATA ENGINEERING FOR EVERYONE

Scheduling data

DATA ENGINEERING FOR EVERYONE

Hadrien Lacroix

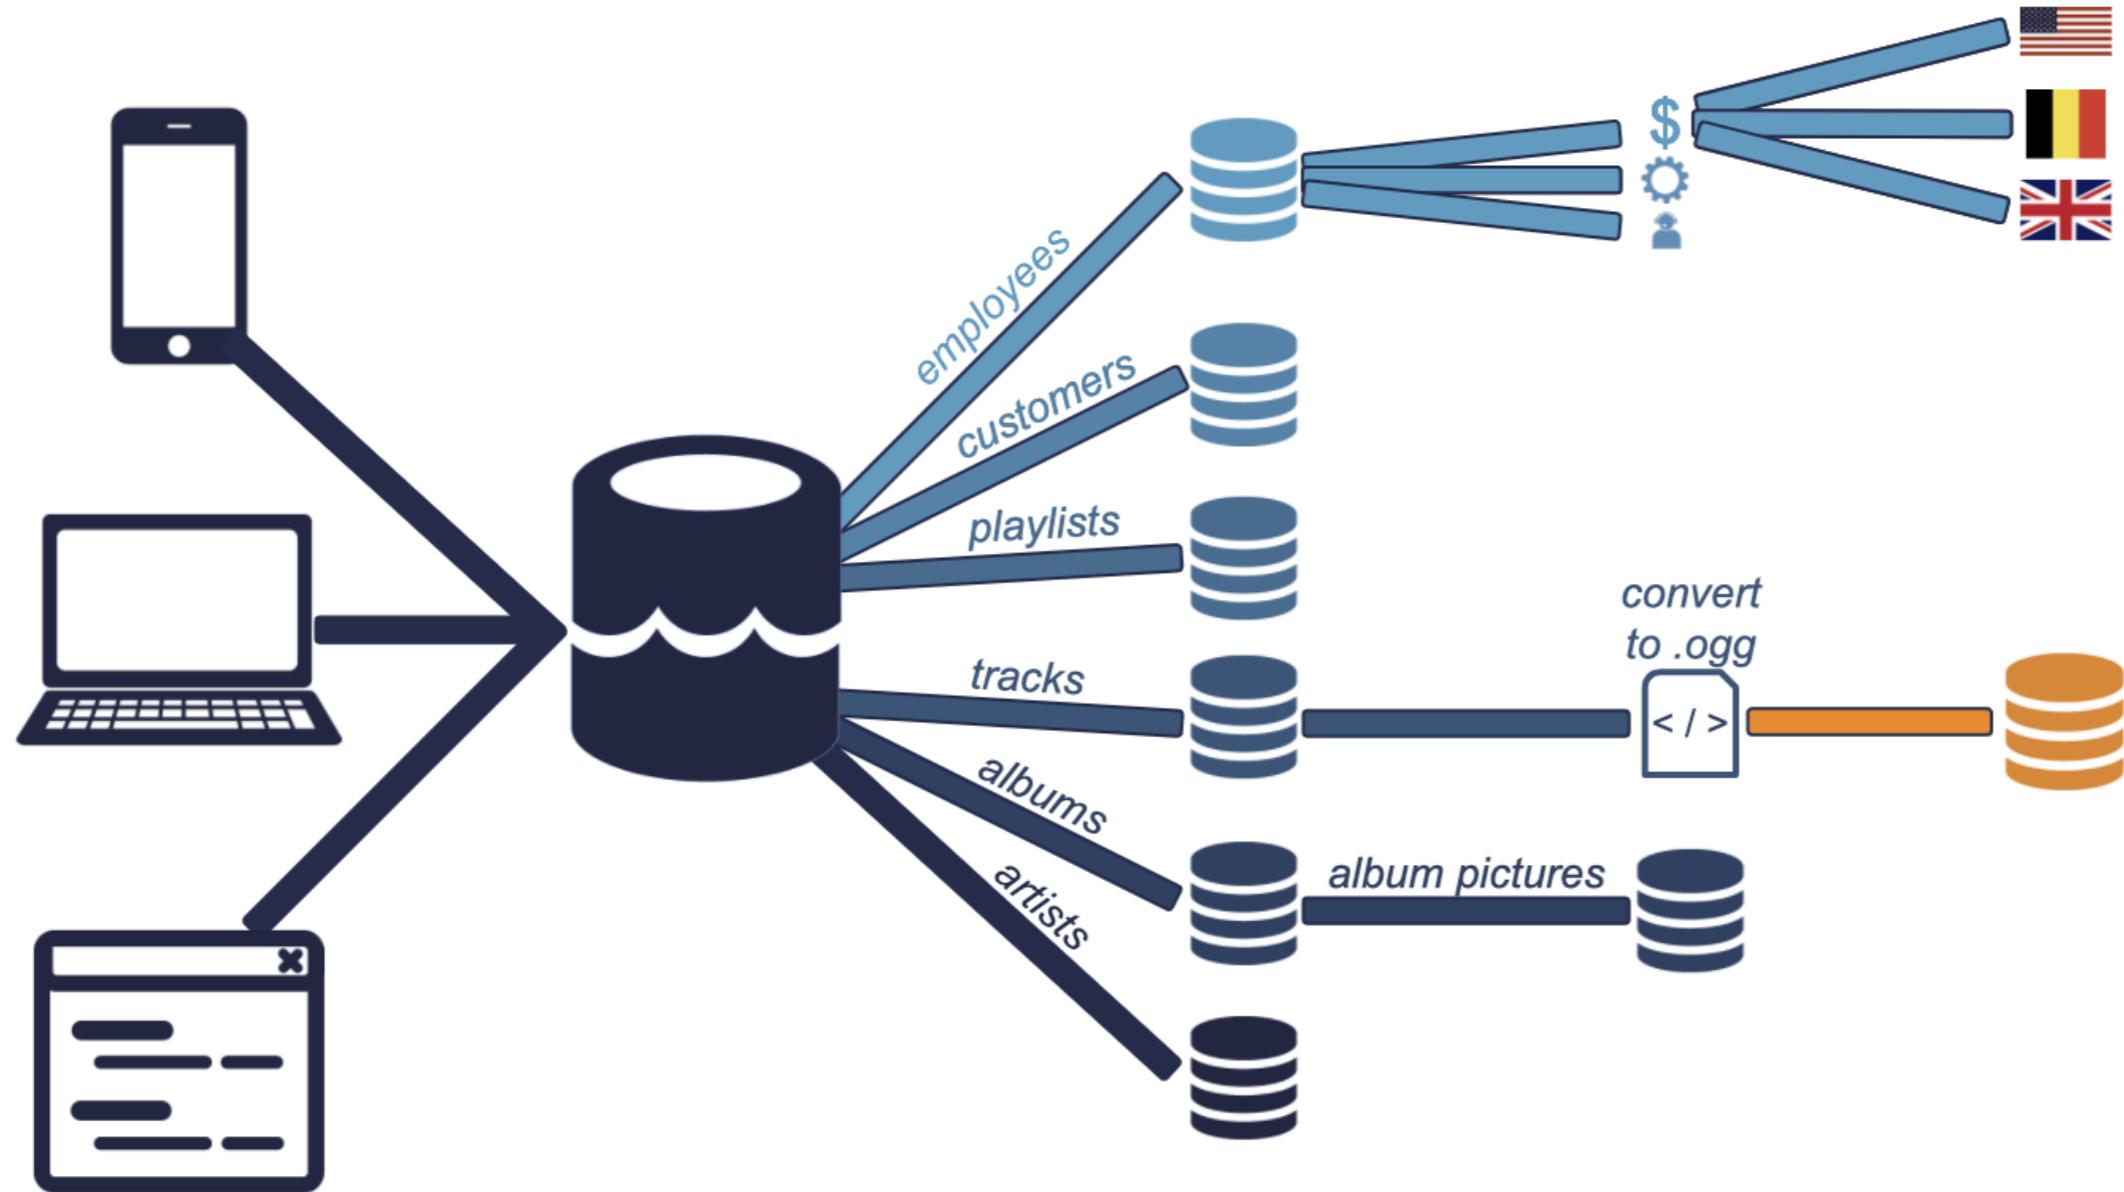

Content Developer at DataCamp

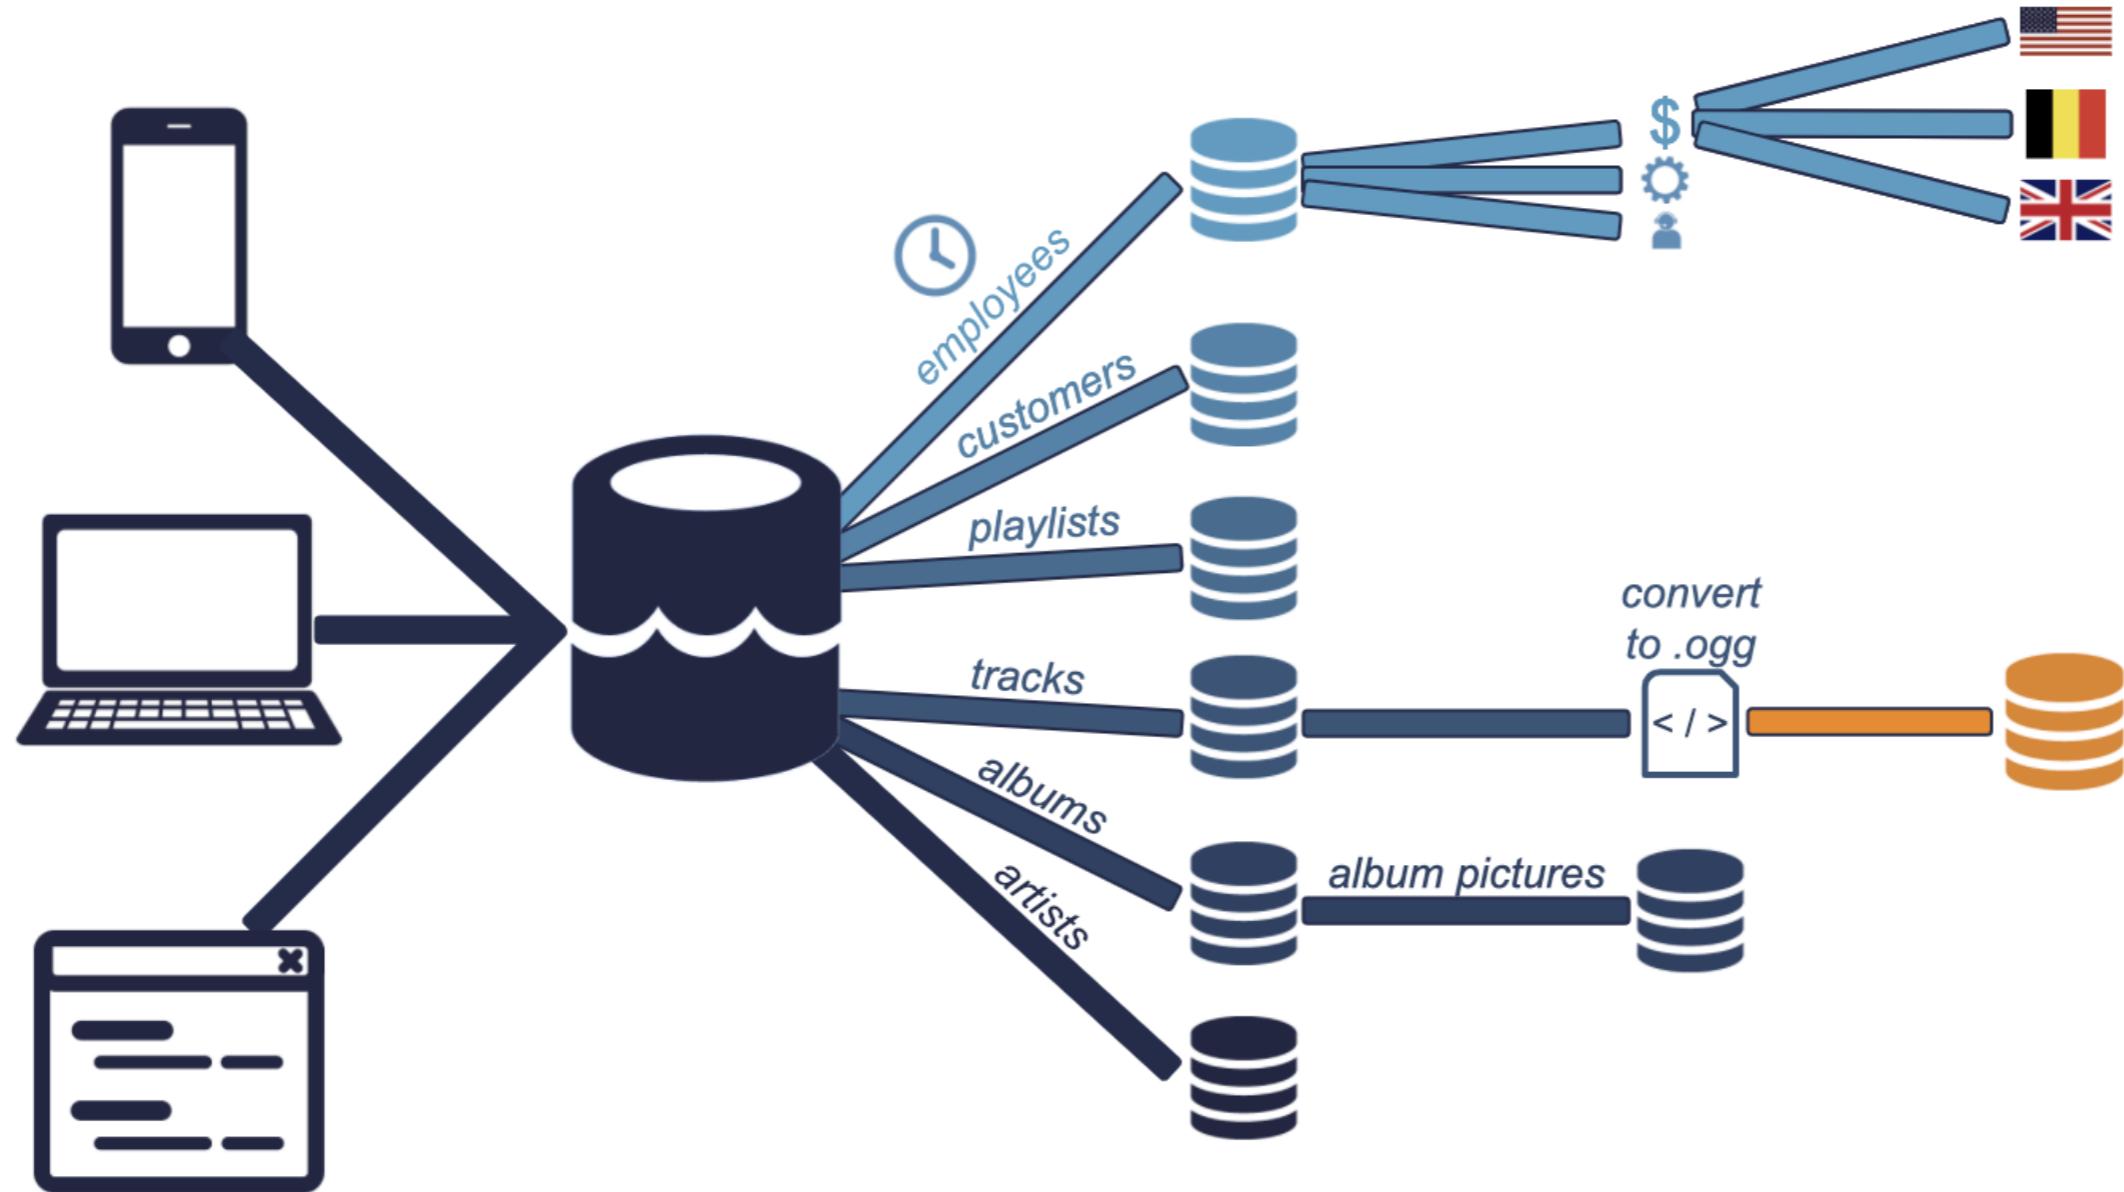

Scheduling

- Can apply to any task listed in data processing
- Scheduling is the glue of your system
- Holds each piece and organize how they work together
- Runs tasks in a specific order and resolves all dependencies

Manual, time and sensor scheduling

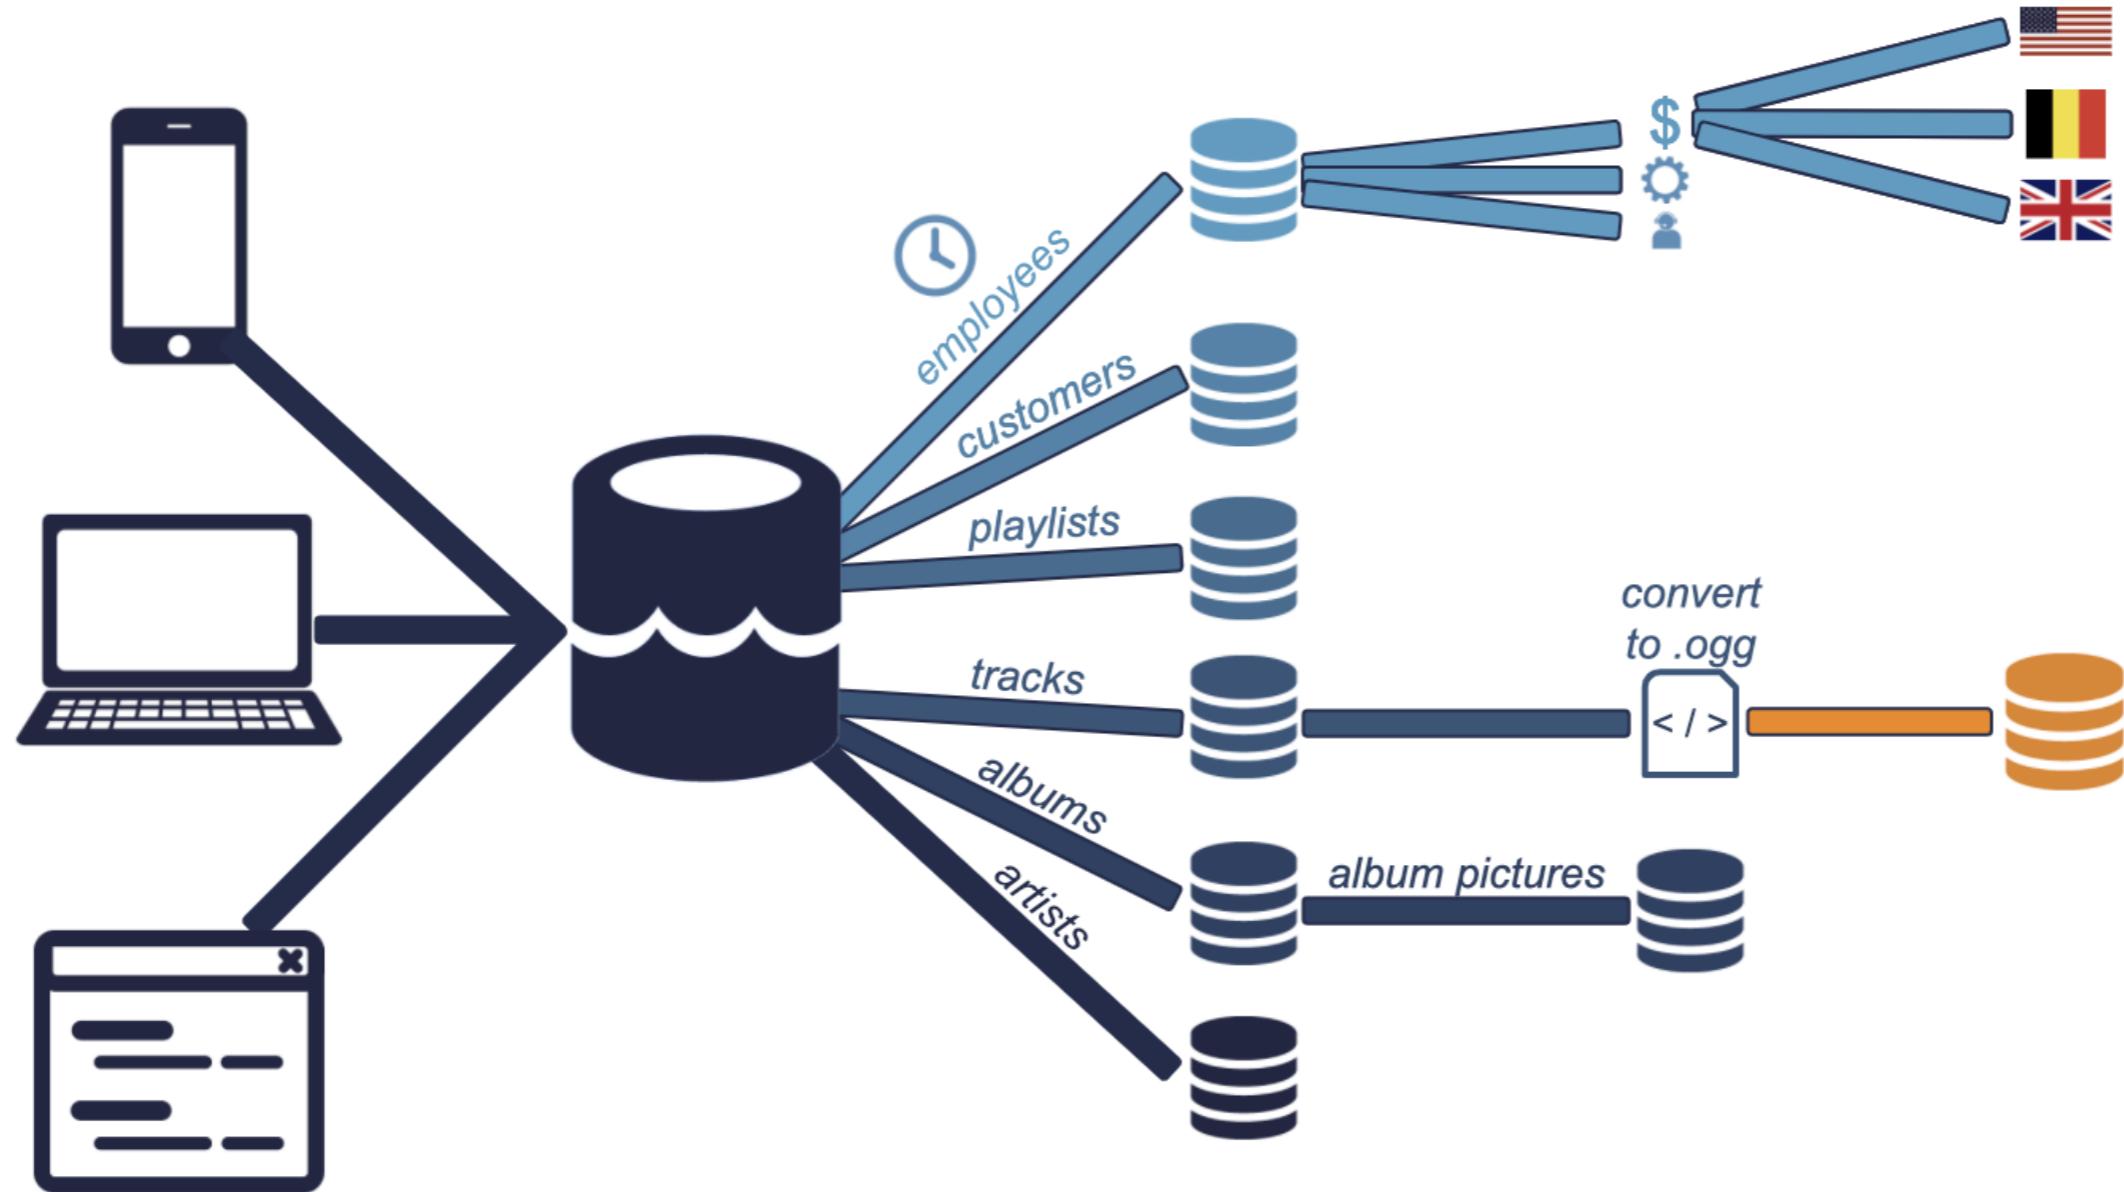

- Manually
 - Manually update the employee table

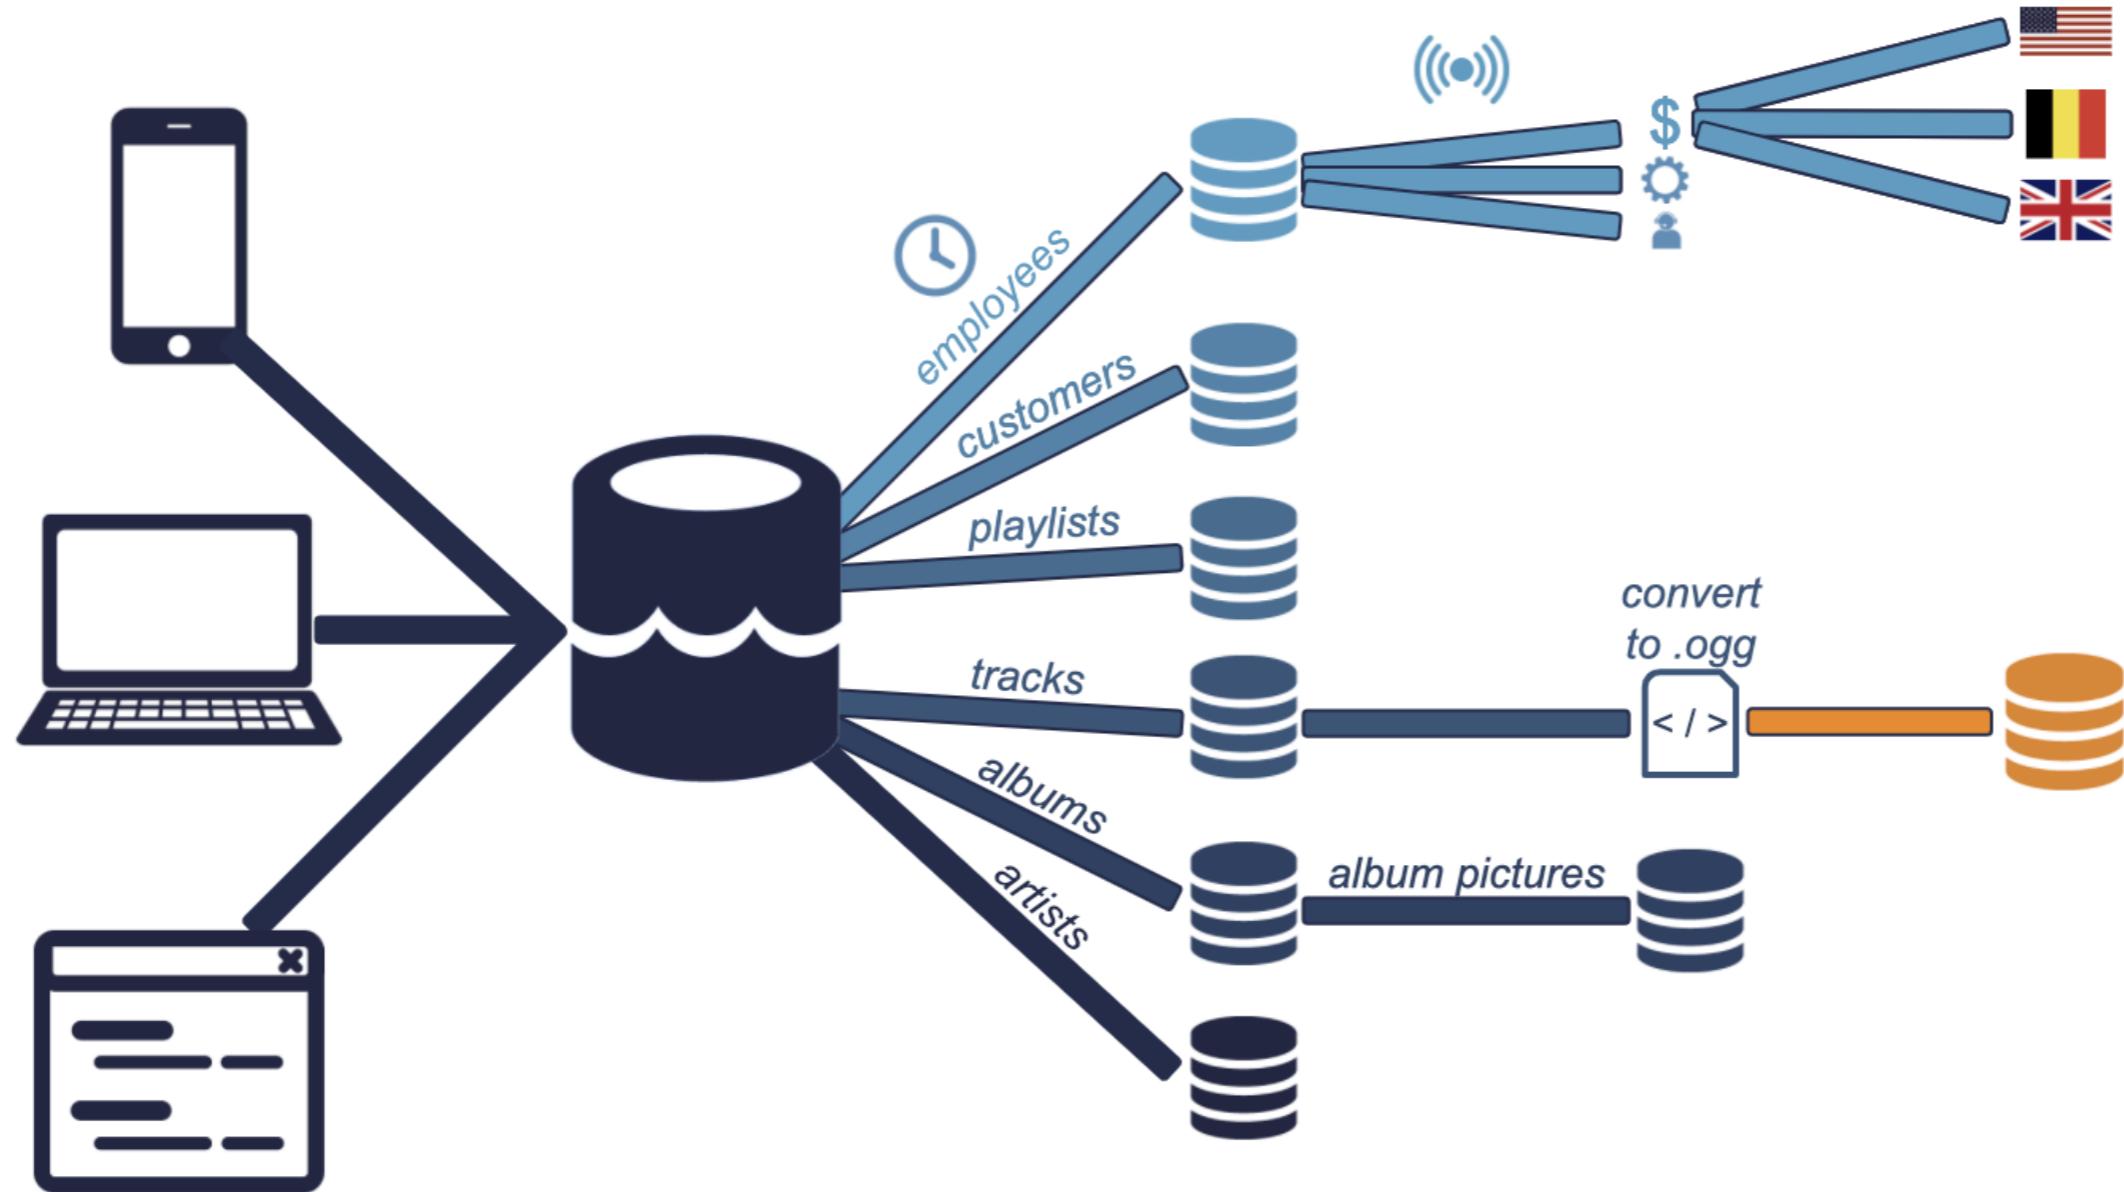

Manual, time and sensor scheduling

- Manually
- Automatically run at a specific time
- Automatically run if a specific condition is met
 - Sensor scheduling
- Manually update the employee table
- Update the employee table at 6 AM

Manual, time, and sensor scheduling

- Manually
- Automatically run at a specific time
- Automatically run if a specific condition is met
 - Sensor scheduling
- Manually update the employee table
- Update the employee table at 6 AM
- Update the department tables if a new employee was added

Batches and streams

- Batches
 - Group records at intervals
 - Often cheaper
- Streams
 - Send individual records right away
 - Songs uploaded by artists
 - Employee table
 - Revenue table
 - New users signing in
 - Another example: online vs. offline listening

Scheduling tools

Summary

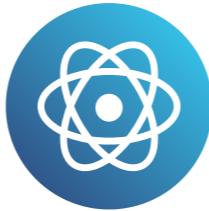

- What scheduling is
- Different ways to set it up
- Difference between batches and streams
- How scheduling is implemented at Spotflix
- Airflow, Luigi

Let's practice!

DATA ENGINEERING FOR EVERYONE

Parallel computing

DATA ENGINEERING FOR EVERYONE

Hadrien Lacroix

Content Developer at DataCamp

Parallel computing

- Basis of modern data processing tools
- Necessary:
 - Mainly because of memory
 - Also for processing power
- How it works:
 - Split tasks up into several smaller subtasks
 - Distribute these subtasks over several computers

Benefits and risks of parallel computing

- Employees = processing units
- Advantages
 - Extra processing power
 - Reduced memory footprint
- Disadvantages
 - Moving data incurs a cost
 - Communication time

Summary

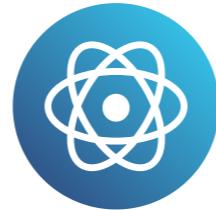

- Benefits and risks
- How it's implemented at Spotflix

Let's practice!

DATA ENGINEERING FOR EVERYONE

Cloud computing

DATA ENGINEERING FOR EVERYONE

Hadrien Lacroix
Content Developer

Cloud computing for data processing

Servers on premises

- Bought
- Need space
- Electrical and maintenance cost
- Enough power for peak moments
- Processing power unused at quieter times

Servers on the cloud

- Rented
- Don't need space
- Use just the resources we need
- When we need them
- The closer to the user the better

Cloud computing for data storage

- Database reliability: data replication
- Risk with sensitive data

Multicloud

Pros

- Reducing reliance on a single vendor
- Cost-efficiencies
- Local laws requiring certain data to be physically present within the country
- Mitigating against disasters

Cons

- Cloud providers try to lock in consumers
- Incompatibility
- Security and governance

Summary

- Benefits and risks of cloud computing
- How it is implemented at Spotflix
- Can cite the main cloud providers and their services

Let's practice!

DATA ENGINEERING FOR EVERYONE

We are the champions

DATA ENGINEERING FOR EVERYONE

Hadrien Lacroix

Content Developer at DataCamp

Actually, YOU are the champion!

What you learned - chapter 1

- What Data Engineering is
- How important it is
- How data engineers differ from data scientists
- What a data pipeline is and how it works

What you learned - chapter 2

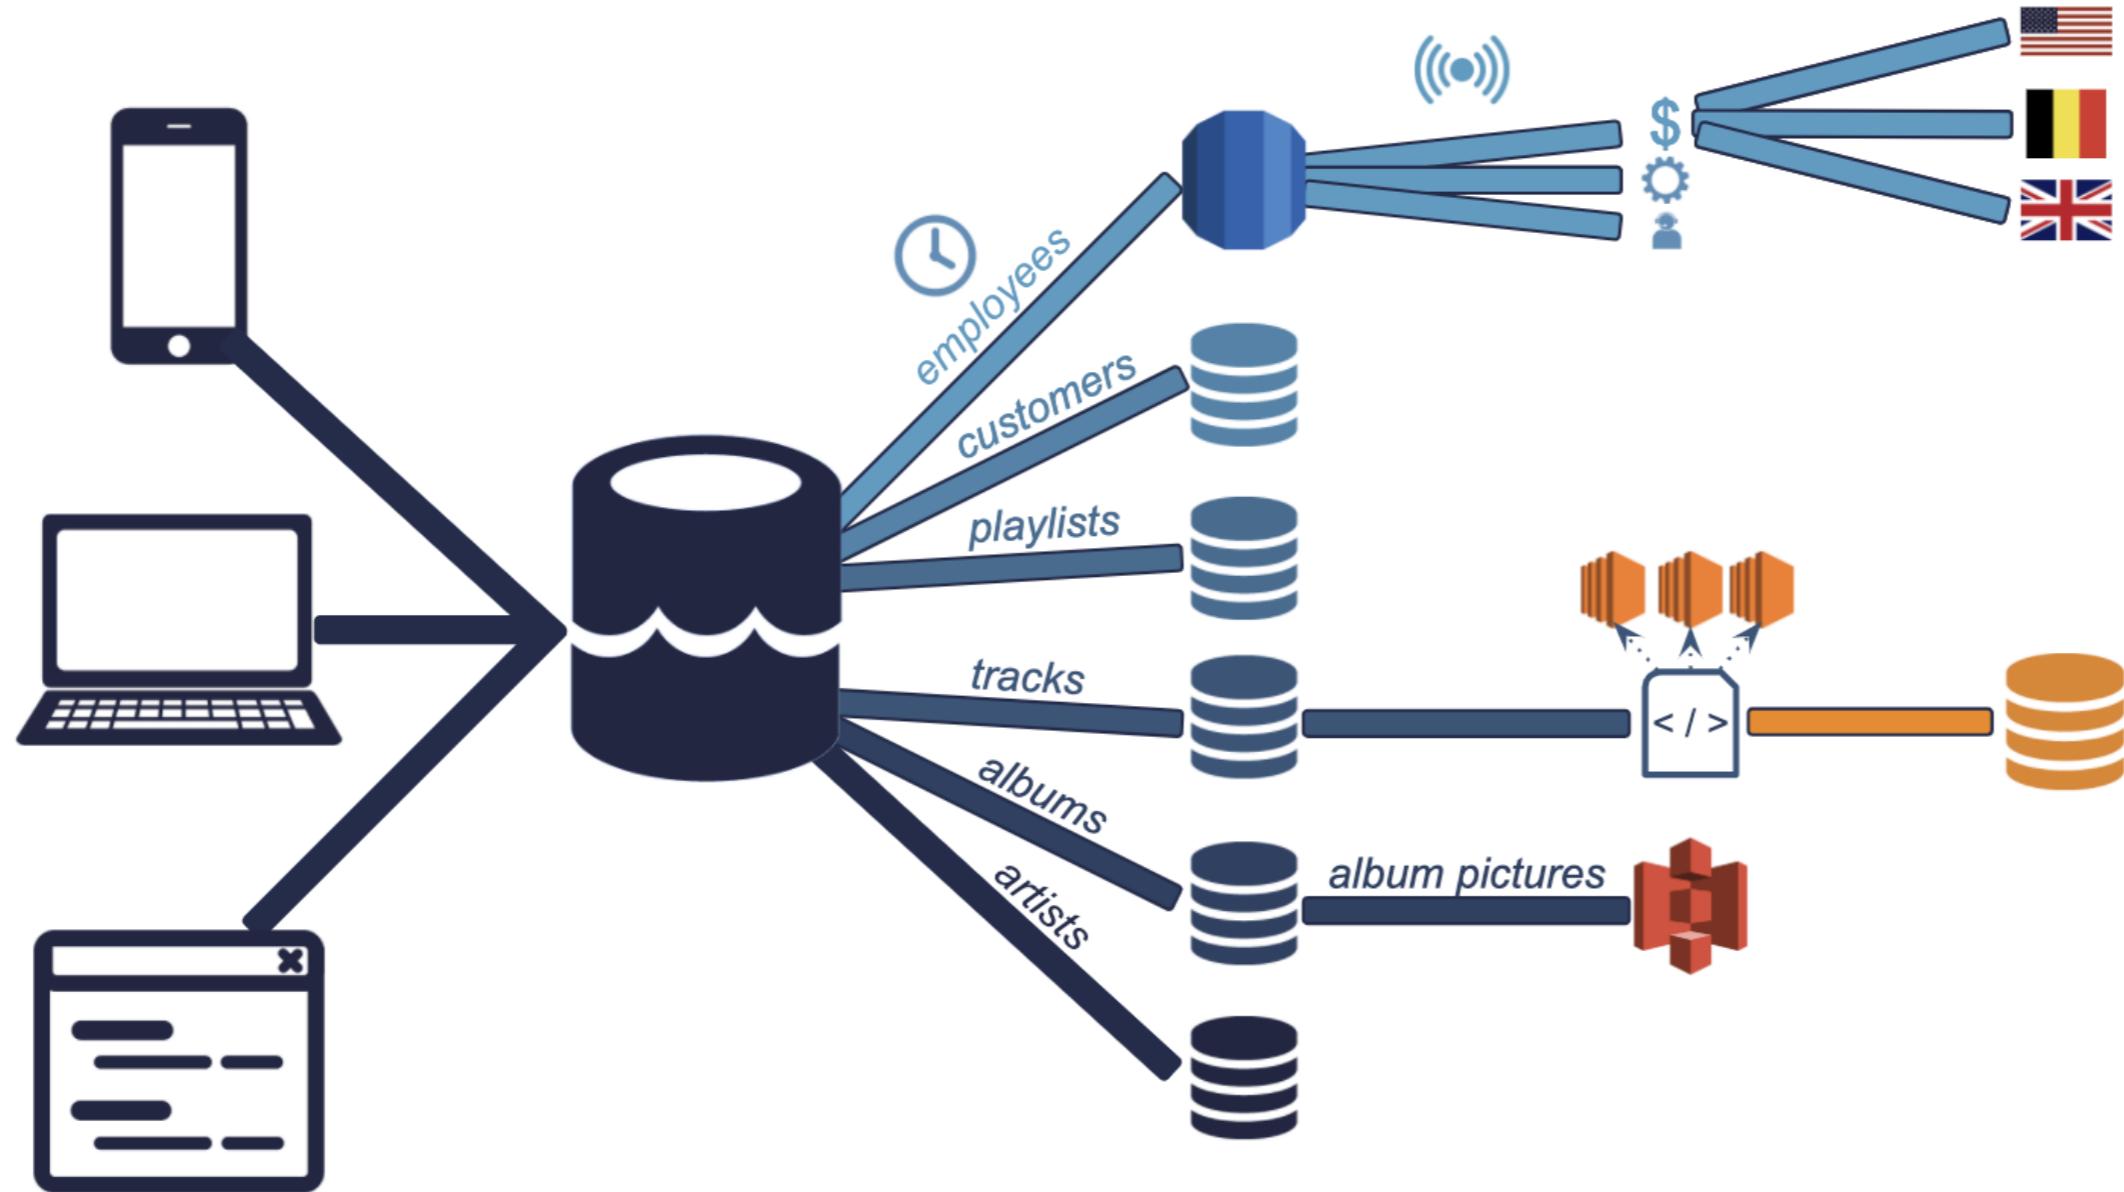

- The different structures data can take
- How fundamentals SQL is
- The differences between data lakes, data warehouses and databases

What you learned - chapter 3

- How data is processed
- How scheduling holds it all together
- Parallel computing
- Cloud computing

And some more

- What SQL code actually looks like
- Main tools and technologies used in data engineering
- And some more

Assessments

In 2019, data engineers overtook data scientists in terms of salary. How did that happen? As eager as companies are of turning their data into gold, if the mine hasn't been build, there isn't much that data scientists can surface. Data engineers lay the groundwork that makes data science possible: no wonder they are in high demand! In this conceptual course, you will get acquainted with their responsibilities, see how they differ from and enable data scientists, and how they manage the flow of data through an organization. Throughout the course, you will understand how data engineering is implemented at a fictional company named Spotflix. At the end of the course, you will be ready to have a conversation with a data engineer, understand what your company's data engineers do, or have a solid foundation to start your journey to becoming one yourself!

1 What is Data Engineering FREE

0%

This chapter starts with an explanation of what data engineering is and why there is an increasing need for it. Equipped with this foundational knowledge, you will then understand where Data Engineering stands in the realm of Data Science, and how a Data Engineer differs from a Data Scientist. You will finish this chapter with a first exposure to a complete data pipeline.
